Briefing Updated: 3/3/2015 3:43 PM

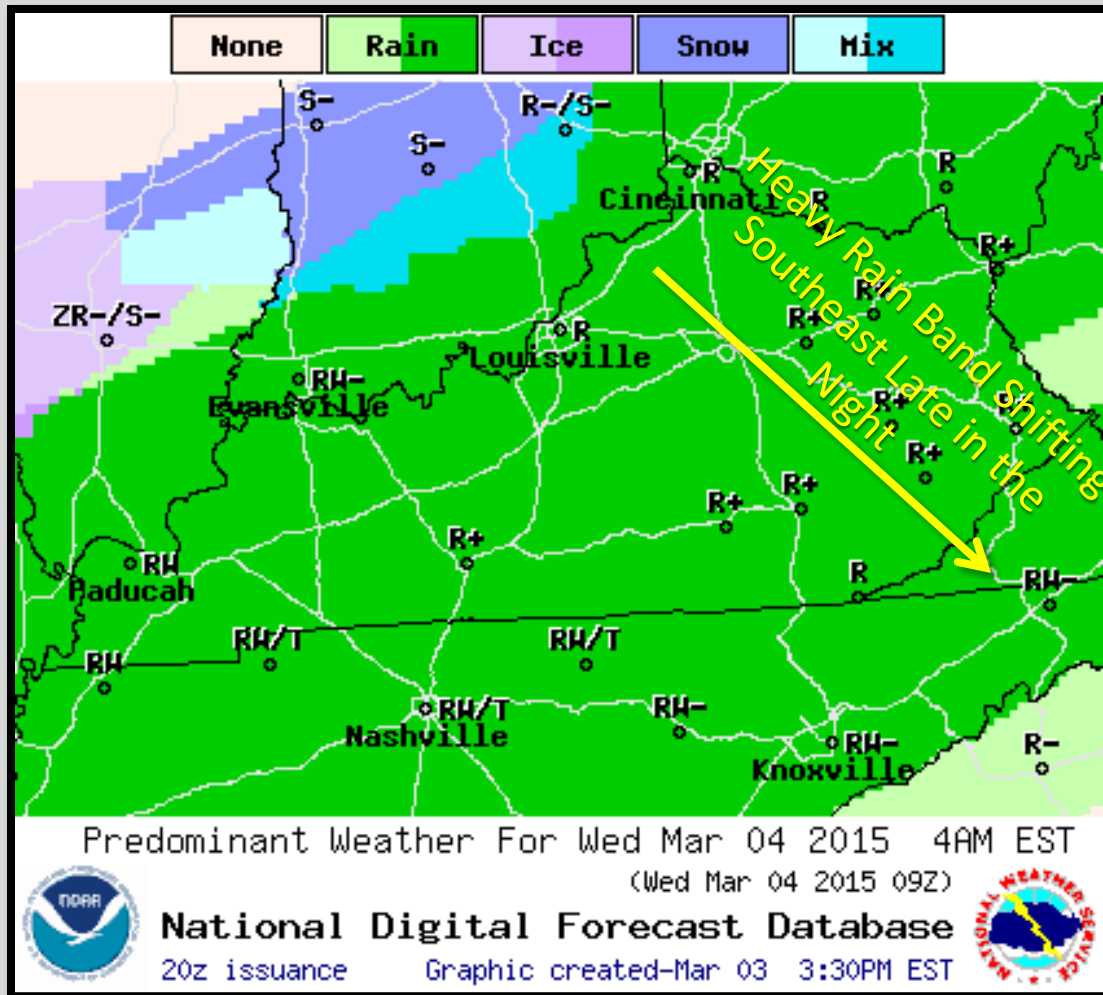

Forecast/Impacts Summary

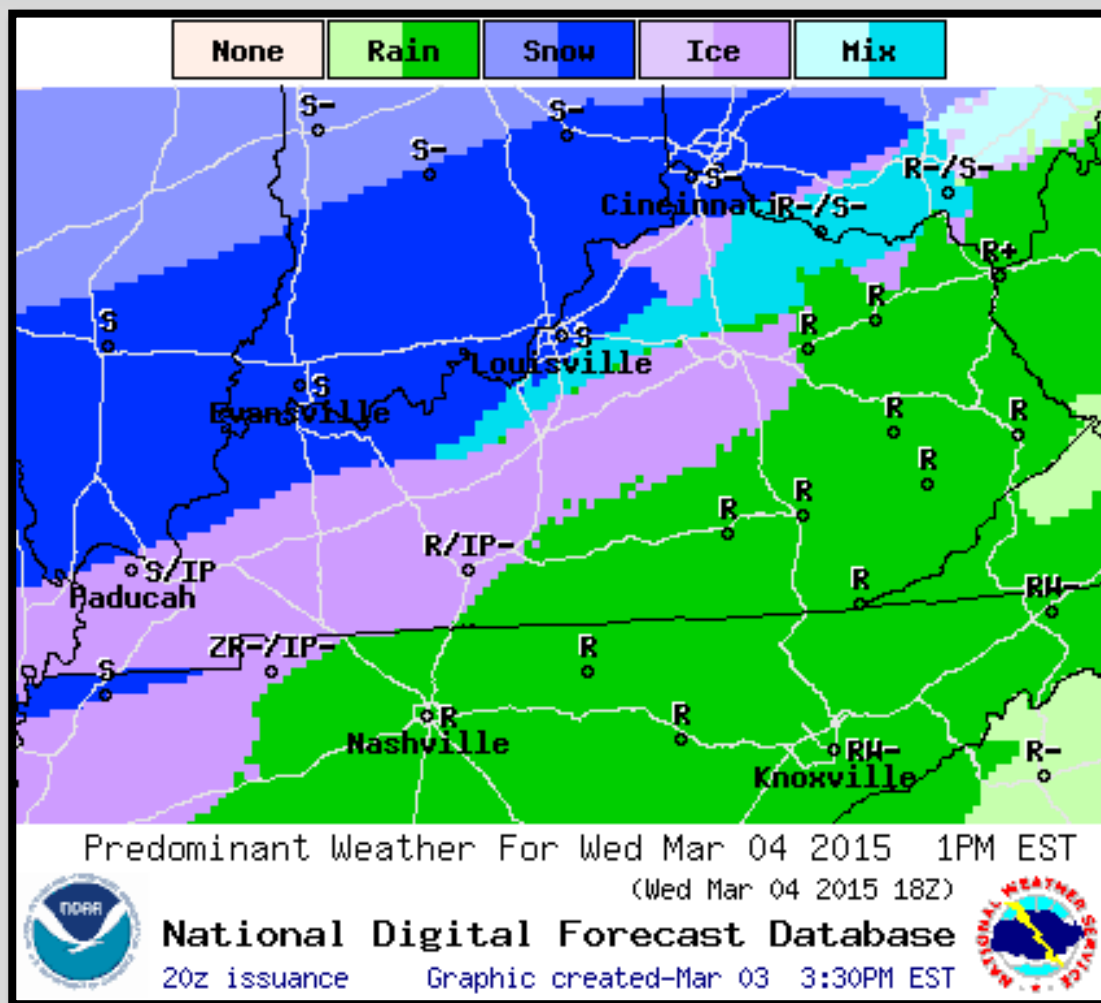

- Periods of heavy rainfall may cause flooding of poor draining urban areas and small creeks and streams late tonight into Wednesday.
- Rapid rises will then occur on area rivers Wednesday night into Thursday and several river points are forecast to reach minor to moderate flood stage.
- **Confidence in the river level forecast has increased and Flood Warnings have been issued for**
 - **Kentucky River at Heidelberg and Ravenna**
 - **Cumberland River at Barbourville and Williamsburg**
- Rain will change to freezing rain, sleet and eventually snow from northwest to southeast late Wednesday through Wednesday night. **Confidence is increasing that significant snow and/or ice accumulations will occur, but precipitation type and amounts remain uncertain.**

Tonight

- Rain, increasing in intensity through the night.
- Heaviest rain will fall over central/NE KY early and shift southeast.
- Flooding of small creeks and streams may begin to occur late in the night.

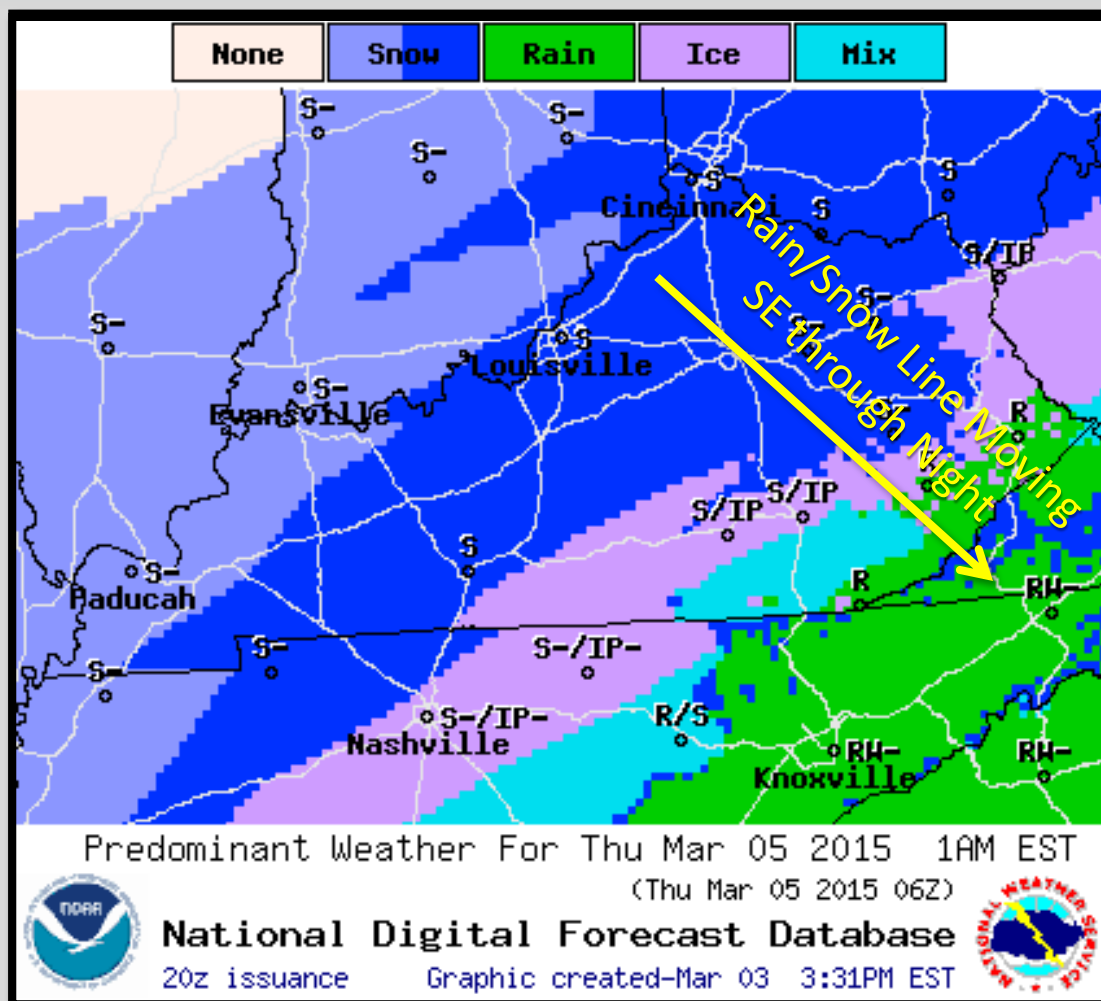

Wednesday Morning/Midday

- Rain, heavy at times for most of east Kentucky
- Some flooding of poor draining urban areas and small creeks and streams likely
- Rapid rises will take place on area rivers.
- Rain will begin to change to sleet/snow along and north of I-64 during the afternoon.

Forecast Timeline

Wednesday Night

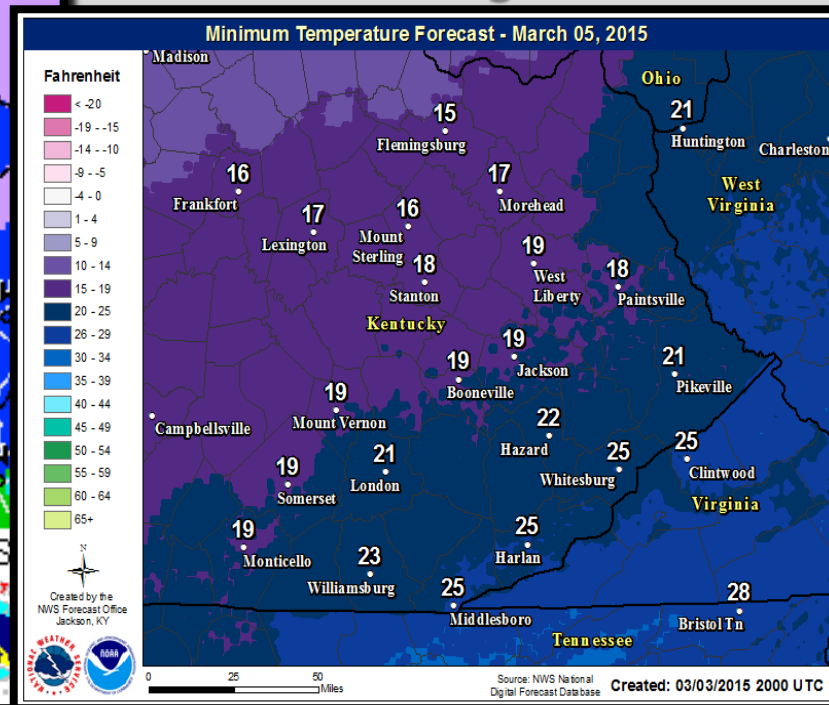

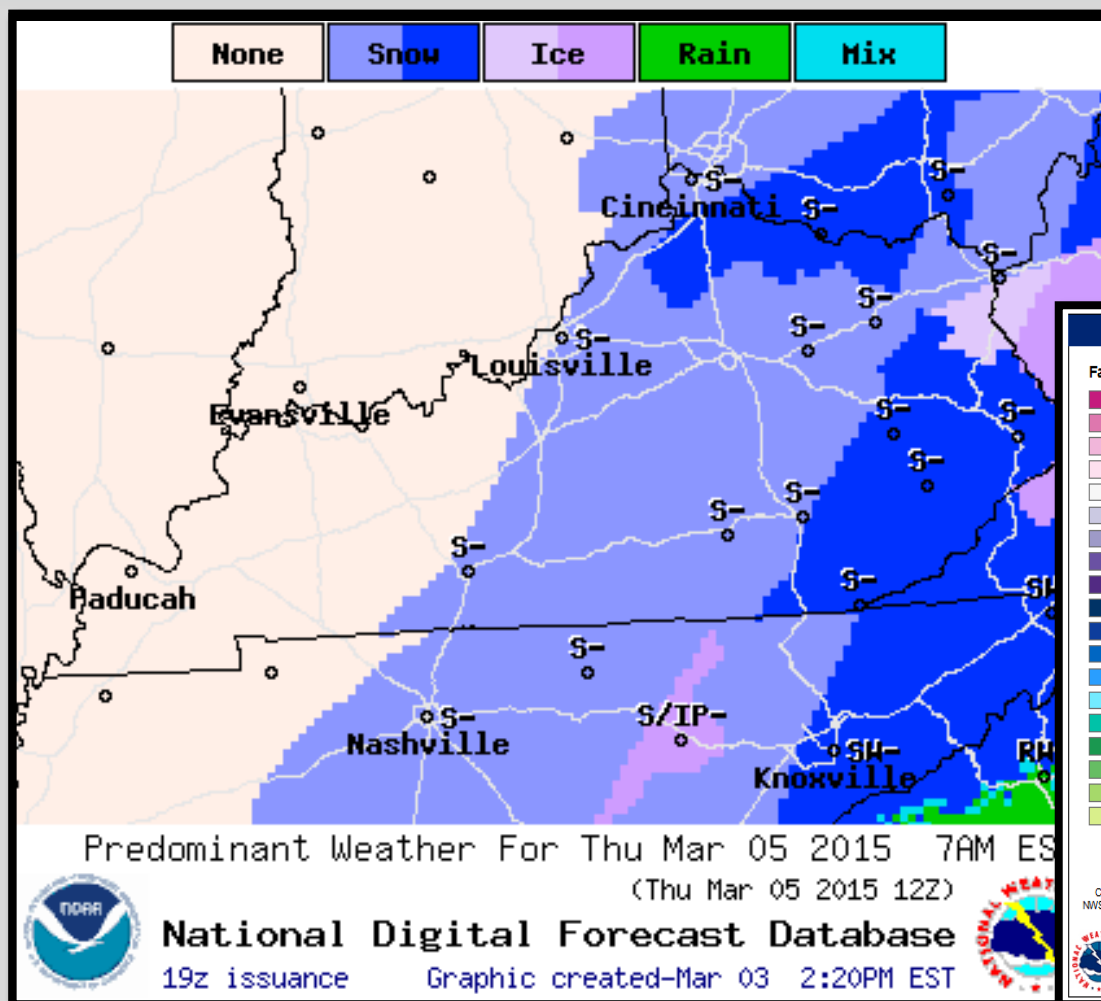

- Some river points approach flood stage.
- Rain will change to sleet and snow.
- Rain may continue into the evening hours in the Cumberland Valley.
- Snow/sleet may fall moderate to heavy at times.
- Several inches of snow and sleet likely.

Forecast Timeline

Thursday Morning

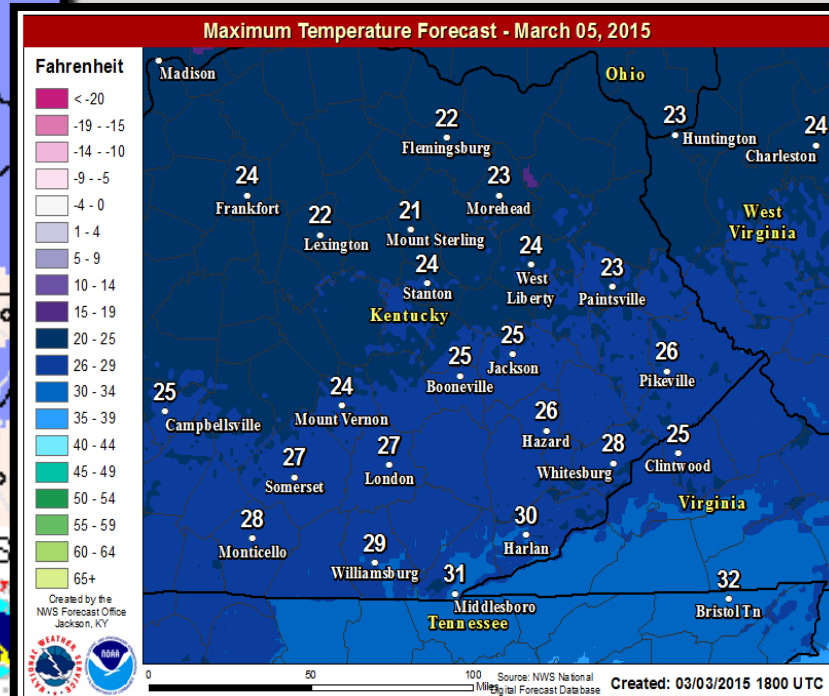

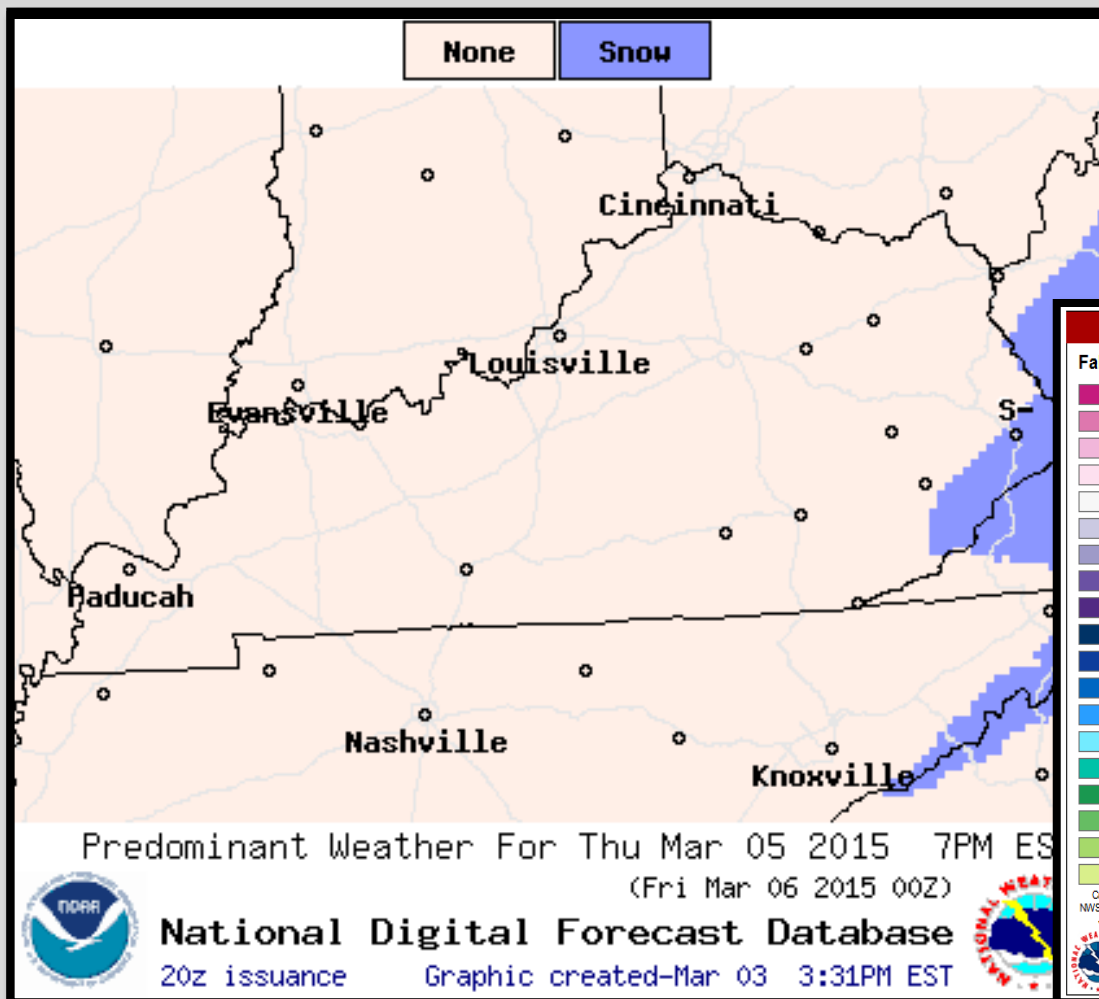

- Snow will diminish from northwest to southeast.
- Temperatures well below freezing.

Forecast Timeline

Thursday Afternoon

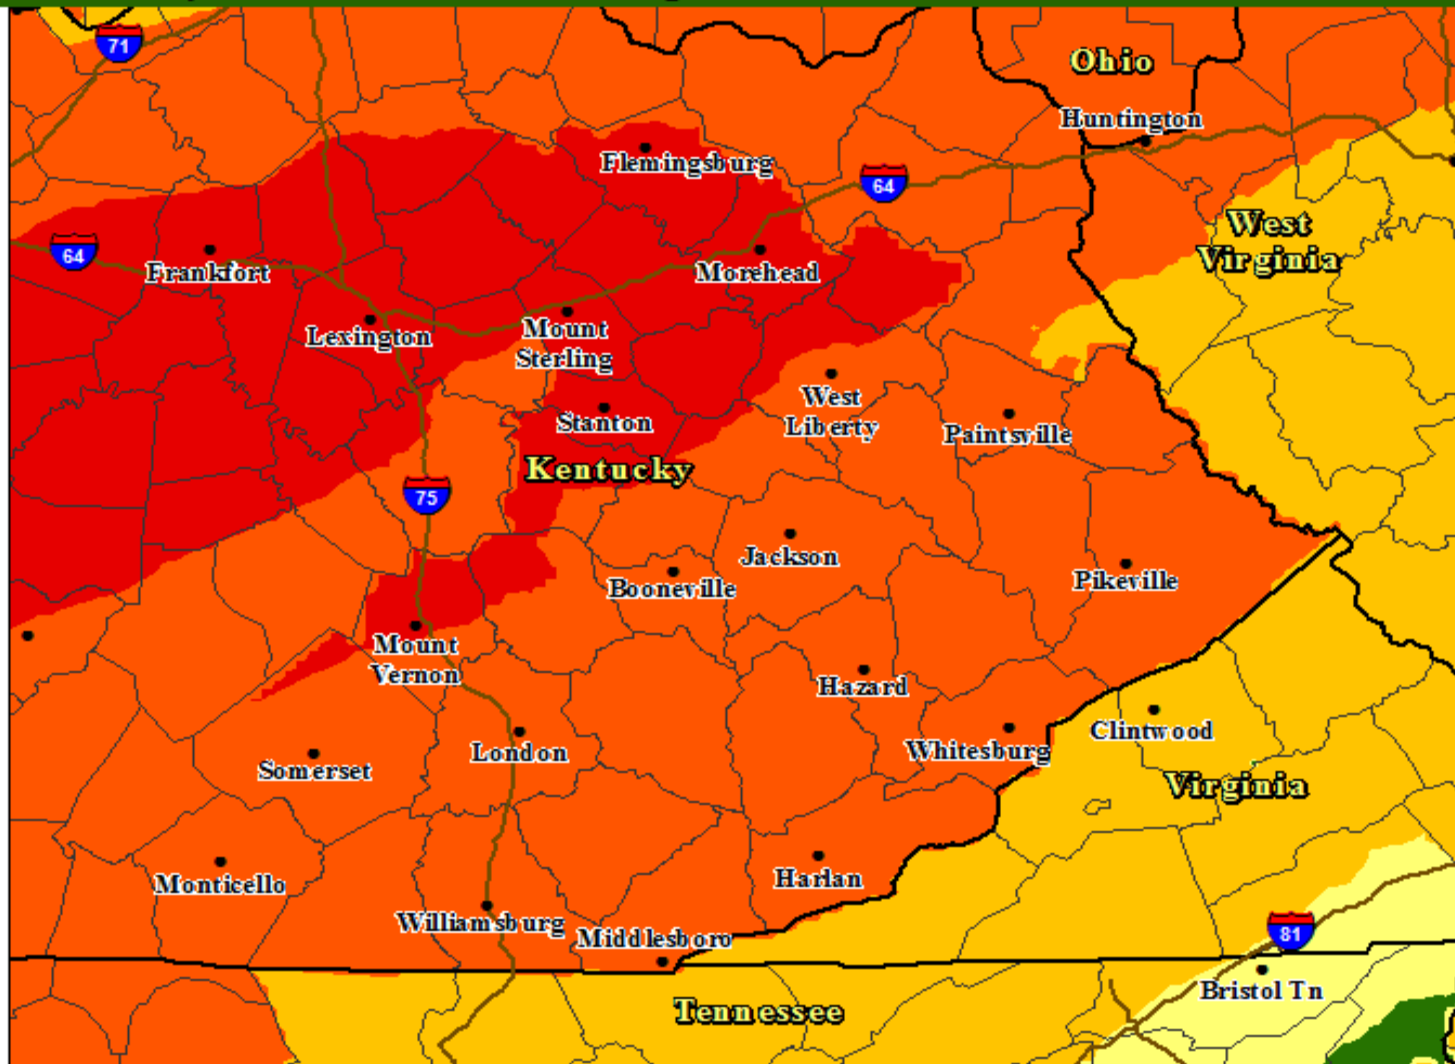

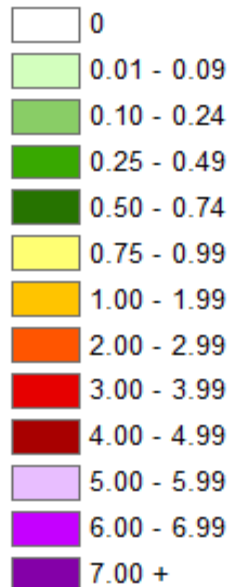

- Snow ending by nightfall.
- High temperatures remaining well below freezing.
